

Emad Rahimi

FROM DATA MODEL TO FINAL INTERACTION

I build web products with Rails, PostgreSQL, Vue, React, TypeScript, and Svelte. I care about clean architecture, thoughtful interfaces, and software that holds up over time.

EXPERIENCE

Independent Software Developer

Public profile ↗

Karlancer · 2025–Present

- Completed 10+ paid client engagements across web applications, JavaScript, Kotlin/Android, and related technologies.
- Maintained 100% on-time delivery and project success, with consistent praise for accuracy and creative problem-solving.

SELECTED WORK

SatrYar

satryar.ir ↗

- Persian-first, browser-based document studio that turns raw text into polished, paginated Word and PDF files while keeping source files on the user's device.

Cinemad

cinemad.emadrahimi.dev ↗

- Film-discovery product with a Rails and PostgreSQL API and a Vue interface, including search, filtering, authentication, profiles, watchlists, and ratings.

Skeleton Loader

github.com/ersync/skeleton-loader ↗

- Ruby gem for generating skeleton loading states in Rails without client-side dependencies.

Persogen

github.com/ersync/persogen ↗

- Documented API for generating realistic synthetic test identities, with JWT authentication and RSpec test coverage.
